Abstract

B *I* x^2 x_2 [link](#)

This study aims to determine the effect of the Discovery Learning learning model assisted by concrete objects media on the understanding of science concepts of grade V students at SDN Glagaharum. This type of research is an experiment (Pre-Experimental Design) using the One-Group Pretest-Posttest Design design. The sample was determined by saturated sampling technique, namely class V A students totaling 25 students. The results of this study indicate that the Discovery learning model assisted by concrete objects media has a positive or significant effect on students' understanding of science concepts. This is evidenced by the results of the pretest and posttest data hypothesis test using the paired sample t-test which shows that the result is $p < 0.000$ which means smaller or less than
